

CND APP

Facilitating participation
at the UN Commission
of Narcotic Drugs (CND)

The **CND App** will help you to track, in real time, what is happening at the **Commission on Narcotic Drugs (CND)**, receive notifications on key events, resolutions and speakers, and access UN agreed language on specific drug policy issues.

Quick access to UN-agreed language

The app features a **repository of resolutions and high-level documents** agreed by international drug control authorities, and a **Book of Authorities**, a collection of relevant documents on key issues concerning drug policy. The database is easily searchable by keyword, document type, theme, date and issuing body.

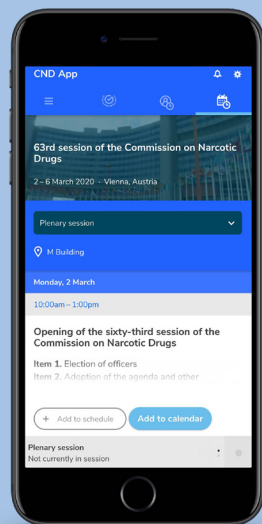

Navigate the schedule

The **Schedule** section lists all events taking place during the CND, including the Plenary Session, the Committee of the Whole, side events and informal NGO dialogues. Each event includes a description, time and location details.

Track proceedings in real time

If you are interested in following particular **events**, you can click on "Add to Schedule" to receive live notifications. You can also track who is speaking at the **Plenary** and the state of negotiations at the **Committee of the Whole**.

The CND App was developed by the International Drug Policy Consortium (IDPC), as part of the Global Partnership on Drug Policies and Development (GPDPD) project, and designed by Studiomaade.
